

Amendments to the Claims

Please amend the claims as follows (the changes are shown with ~~strikethrough~~ for deleted matter and underlining for added matter). A complete listing of the claims is set out below with proper claim identifiers.

1. (Original) A curable composition which comprises following components (A) to (D) as essential components.

(A) an organic polymer containing, within the molecule, at least one alkenyl group capable of undergoing hydrosilylation but not containing at least one group selected from an alkoxy group and an epoxy group,

(B) a compound containing at least two hydrosilyl groups within the molecule,

(C) a hydrosilylation catalyst and

(D) a compound containing at least one structure selected from the structure represented by the general formula (1);

(wherein M is an atom selected from a silicon atom, an aluminum atom and a titanium atom, and R is a hydrocarbon group); and an epoxy group structure.

2. (Original) The curable composition according to Claim 1 wherein the weight ratio between the component (A) and the component (D) is within the range of 90.0:10.0 to 99.7:0.3.

3. (Original) The curable composition according to Claim 1 or 2 wherein the component (D) contains, within the molecule, at least one alkenyl group capable of undergoing hydrosilylation.

4. (Original) The curable composition according to Claim 3 wherein the three substituents bound to the double bond contained in the alkenyl group in the component (D) each is a hydrogen atom.

5. (Currently Amended) The curable composition according to ~~Claim 3 or 4~~Claim 3

wherein the composition comprises a component (E) synthesized by reacting the component (B) in advance with the component (D) containing, within the molecule, at least one alkenyl group capable of undergoing hydrosilylation, the component (A) and the component (C) as essential components.

6. (Currently Amended) The curable composition according to any of ~~Claims 1 to 5~~Claim 1 or 2

wherein the component (A) polymer contains, at a molecule terminus, an alkenyl group capable of undergoing hydrosilylation.

7. (Currently Amended) The curable composition according to any of ~~Claims 1 to 6~~Claim 1 or 2

wherein the component (A) organic polymer is an oxyalkylene-based polymer.

8. (Currently Amended) The curable composition according to any of ~~Claims 1 to 7~~Claim 1 or 2

wherein a conductivity providing agent (F) is added to the curable composition according to any of Claims 1 to 7.

9. (Currently Amended) The curable composition according to any of ~~Claims 1 to 8~~Claim 1 or 2

wherein an elastomer obtained by curing of the curable composition has an ASKER-C hardness within the range of 20 to 80°.

10. (Currently Amended) An elastic roller
wherein at least one elastic layer derived from the curable composition according to any of ~~Claims 1 to 9~~Claim 1 or 2 is provided around a conductive shaft.

11. (Original) The elastic roller according to Claim 10
wherein at least one covering layer is provided around the outer surface of the
elastic layer.

12. (Original) The elastic roller according to Claim 11
wherein the covering layer is derived from a urethane bond-containing
compound.

13. (Currently Amended) The elastic roller according to ~~Claim 11 or~~
12Claim 12
wherein the elastic layer surface is treated with a primer and then the covering
layer is formed thereon.
